coresuite country package

| coresystems®

The high level of standardization significantly reduces the time taken to implement SAP Business One.

coresuite®

- ▶ Coverage of country-specific requirements
- ▶ Optimization of business processes
- ▶ Simplified print and layout management

- ▶ Comprehensive search function
- ▶ Standardized graphical reporting
- ▶ Flexibility towards individual customer requirements

You can benefit from all of these advantages for just USD 400 – the coresuite country package is installed locally and guarantees instant added value thanks to the quick implementation time!

Your accounting at a glance

You can access account statements, charts of accounts, budget reports, cash flow calculations or even just your balance in a matter of seconds. The accounting function provides you with a clearer presentation of data and data grouping, improved drill-down functionality and concrete evaluations at the level of a profit centre, distribution rule or project. Furthermore, classifications have been introduced to give you reliable financial indicators.

Simple search function for your ERP

From all of the important fields in SAP Business One (including user-defined fields), you can find documents and business partners within seconds, using various search requests. Whether you are searching for files by contact name, open quotations, tasks, opportunities, receipts or even dates – looking for files with this search engine is as easy as working with Google!

Dashboards

Within the coresuite country package you receive numerous sales, accounting and service dashboards, which are created with SAP Crystal Dashboard Design. These exiting dashboards can be integrated completely as a widget in SAP PL 12. You can modify and adapt all dashboards to your personal needs.

Extended printing and layout management

The package includes standard documents that range from quotations, order confirmations, delivery notes and invoice layouts to reports for CRM, sales, purchasing, service, warehouse or production departments and much more. With this package all you need to do is to manage and update one single layout for all marketing documents. Thanks to this master layout system, changes can be made within a few minutes and print jobs can be created according to the type of document.

Your ERP, customized for you

The coresuite country package is the perfect tool for customizing a new or existing SAP Business One environment. Do you want to color, hide or block fields, define mandatory fields, create new tabs or move a UDF to the main form? No problem – in just a few clicks, the function can be in your system and will be in operation. Thanks to the simple import and export support, you have access to all existing customize rules. You can tailor the existing rules to your own personalized requirements or can also create new rules with the help of an assistant.

SAP Cockpit Widgets

As part of the coresuite country package, you receive a selection of exciting widgets that can be used in the new SAP Cockpit – such as the simple enterprise search functionality, KPI dashboards and iGoogle.
