

# Shipping with SAP Business One<sup>®</sup> just got easier with ECS Solution

xCarrier ECS is a cloud-based Transportation Management System for SAP Business One

Organizations running SAP have a significant advantage. However, if your business ships orders via small Parcel, LTL/TL/FL, and Ocean Freight, you always have to depend on external 3rd-party systems or black box solutions.

## Why Choose ECS?

- SAP does not include carrier-compliant shipping as a standard transaction.
- It is costly to integrate 3rd-party or carrier-provided shipping applications with SAP.

When your business relies on getting the right item to the right customer, at the right time and place they need it, your SAP Business One system should:

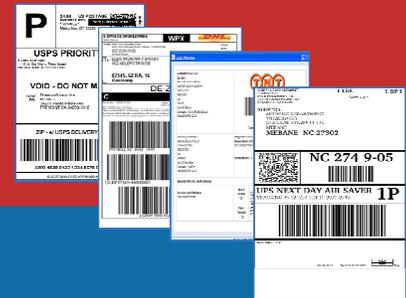

- Accurately rate & route all shipments
- Print carrier-compliant labels & documents
- Prevent shipping errors that result from bad or incomplete information
- Electronically communicate with carriers, trading partners, and customers
- Track and monitor shipment status
- Automatically update Deliveries and Shipments
- Receive Proof of Delivery

## A NEXT GENERATION SHIPPING SOLUTION FOR SAP BUSINESS ONE

Leveraging years of industry expertise and proven software solutions, ProcessWeaver offers a single-source solution that allows enterprise users to rate, ship, and track small parcel and LTL/TL shipments. Our solution takes the complexity out of multi-carrier shipping and provides a comprehensive, cost-effective, and ready-to-use application. Why consider integrating with just any 3rd-party shipping system, when you can leverage your investment in SAP with a shipping solution that is a perfect fit for SAP customers and your suppliers.

## ENTERPRISE CENTRALIZED SHIPPING (ECS)

ProcessWeaver provides complimentary solutions to SAP's ERP offering - the ability to rate, pack, ship, and track packages from within one system. ECS ensures that you consistently meet carrier and customer requirements for rating, routing, label and document printing, and EDI, without relying on an external 3rd-party solution. ECS ensures shipping is faster, more accurate, less problematic, and results in lower transportation spending and enhanced operational efficiencies.

## ECS is built for the way businesses running SAP need to ship.

### MULTI-CARRIER COMPLIANCE

Powered by the most advanced carrier compliance technology, ECS ensures that you consistently meet carrier requirements for rating, routing, labeling, international documents, and EDI. ECS supports certified shipping for DHL, FedEx, TNT Express, UPS, USPS, and more. In addition to small parcel carriers, ECS supports the rating and shipping for virtually any LTL/TL carrier.

### RATE SHOPPING

Not all carrier services are created equal. For this reason, ECS helps you determine the least expensive way to ship a package or evaluate the least costly method when considering delivery date requirements. ECS' rate shopping functionality can be accessed from any SAP User Exit, so it can be integrated into virtually any business process including SAP Quote, Sales Order, SAP Purchasing, Packing, and Shipping. ECS ensures that you always provide the fastest shipping at the lowest possible cost.

### UPDATING SAP DELIVERIES, SHIPMENTS, AND SALES ORDERS

For each shipment, ECS automatically updates the Delivery with freight amount, tracking number, and any other information you might require to help facilitate other SAP processes such as Post Goods Issue (PGI). In fact, ECS can automatically trigger the PGI as part of the shipping process. ECS does not stop there; as your shipments move through the supply chain and are delivered, ECS automatically updates SAP with tracking and freight.

### ENHANCED SUPPLY CHAIN VISIBILITY

Real-time updating of your Deliveries/Shipments/Sales Orders with shipping and tracking information means real-time supply chain visibility. Enterprise users can easily access POD and tracking information from Shipments Tab within the delivery. Your enterprise users can access all tracking numbers associated with a specific Delivery, as well as delivery dates and signature information. Tracking numbers can be linked to Handling Units (if applicable), and contain hyperlinks that take users to carrier web sites for more detailed tracking information; all from within the SAP landscape. Enhanced real-time supply chain visibility made easy in SAP.

### ARE YOU READY FOR A PERMENT FIX?

Why consider any 3rd party shipping system that can take months to deploy, when you can leverage your investment in SAP with a solution that resides within the SAP Business One landscape® and can be up and running across your enterprise in weeks! Requests a live ECS Demo—Experience the features, functionality and benefits of ECS, Contact us at: (888) 932-8373; Email: sales@processweaver.com.

## OTHER SAP SOLUTIONS

ProcessWeaver offers many other SAP solutions that complement ECS and provide automation for a number of fulfillment and logistics operations.

### ENTERPRISE ADDRESS VERIFICATION

Is a real-time address verification solution which instantaneously validates the recipient's address using carrier provided APIs.

### BUSINESS PARTNER SCREENING

Prevents transactions with unauthorized companies or individuals through automated credentialing of business parties including freight forwarders, intermediate consignees & ultimate consignees and seamlessly enforces "Restricted/Denied Party Screening" using MK Data Services.

### ENTERPRISE FREIGHT SHOPPING

Provides real-time freight shopping across multiple services and carriers from around the world.

### GLOBAL TRADE AESDirect EEI/SED LINK

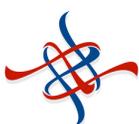

Provides a seamless way to file the Shipper's Export Declaration (SED)/Electronic Export Information (EEI) of all of your shipments. GEL facilitates filing with AESDirect, eliminates fatal errors, and ensures 100% compliance with government export regulations

### ENTERPRISE TRACK & TRACE

Provides real-time access to transit information, proof of delivery, signature information, and scanning results from carriers to proactively support your customers and provide them with full visibility of the supply chain events.

### ENTERPRISE FREIGHT AUDITING

Automates in-house freight auditing through verification of billing accuracy in carrier invoices and checks for billing errors, fraudulent use, discount errors, service failures, rate verification, and Guaranteed Service Refunds (GSR).
