THE POWER TO MAKE IT HAPPEN

X-CART Integration

Integrating X-CART with business software and more

X-CART Integration

By integrating X-CART with your business software you will eradicate repetitive employee data entry, remove the risk of costly errors and significantly decrease order fulfilment times. What are you waiting for? eCommerce doesn't have to be painful.

Orbis Software and its global partner community have collaborated to deliver the drag and drop functionality you need to quickly and simply integrate with X-CART.

The Problem:

X-CART is a powerful eCommerce solution that is used by many organisations worldwide but it still needs people to extract its data and rekey that information into business applications. Employees also extract data from business software and rekey that into X-CART. This takes time, is error prone and is an unnecessary cost.

The Solution:

The TaskCentre X-CART Integration solution automates the flow of information between X-CART and your business software.

Pulling X-CART orders into business systems

Its been a busy day, you've just taken 300 orders in X-CART. Sadly, some time starved employee has had to extract these orders from X-CART and manually rekey the data into your business software. Ouch.

TaskCentre is a market proven solution that automatically extracts data from X-CART and seamlessly enters this into your business software. No need to rekey orders. It really is that simple for our customers.

Integrating X-CART with courier services

So, you've manually rekeyed all orders taken in X-CART into your business software but you are now faced with the task of placing them with your preferred courier service(s). More costly administration for you and your employees.

TaskCentre will automatically take orders from your business system (Not forgetting that TaskCentre can automatically insert orders in there in the first place!) and place them with your courier service provider. It will also automatically print the labels out for your despatch team to process. More time saved via automation.

Pushing order statuses and more into X-CART

Everyone involved with eCommerce understands that data also needs to be pushed up. Data such as order statuses, new products, stock level changes, delivery tracking numbers etc all need to be manually entered into X-CART.

TaskCentre will automatically extract data such as new products and images, stock availability levels, order statuses etc from the relevant sources and push that straight back into X-CART. No employee administration required. Ever.
