coresuite designer

Fully integrated printing and reporting tool for SAP® Business One.

Accelerated integration time.

Thanks to his diversity of templates, you can save time with the **core**suite **designer**. The produkt contains country specific standard documents in the delivery content such as marketing documents with offers, sales confirmation, delivery notes, invoice layouts and reports in the area CRM, sales (sales analysis), purchase, service, warehouse, production etc.

Dynamic: only one layout for all languages.

With **core**suite **designer** you only need to manage and maintain one layout for all marketing documents. Global changes are made in few minutes. In the layout you can determine the print data according to the document type. For example, you can have two different footer areas, one to be printed only in offers, and the other in all invoices or credit notes. Thanks to the new SAP® Business One translation functions, all texts in the layout can be translated to all languages in a simple manner.

Individual reports.

All important master data and documents from SAP® Business One, for which predefined data sources have been installed, are at your dispence. Alternatively, individual SQL query incl. parameter can be set up by the standard SAP® query manager and can be used in your reports.

Printer outputs.

You can define the course of a print task precisely, e.g., the first or last page should be pulled from another tray. Further parameter such as user, copy, language and a free definable tax parameter can help to identify a printer as well. Duplex prints with a dyamic back side layout can also be configured.

Pivot (contingency table).

The Pivot object collects data in several dimensions and can thus answer questions like: „How is the product turnover distributed over the years and per employee?".

eMail, fax, Word, Excel, PDF.

With **core**suite **designer**, emails can be created from SAP® Business One. The eMail addresses and texts can be automatically defined. The eMail is automatically generated and the underlying layout is attached as a PDF. The reports can also be directly converted to Word or Excel for further editing.

Charts and diagrams.

The charts in **core**suite **designer** are rotatable around both axes. There are bars, verticaly and horizontal, cake, cone, octahedron and lines as well as the versions in 2-D/3-D and graded, grouped, stacked or simple. The **core**suite **designer** provides the possibility to compile clockhand, bars, digits and a lot more.

Individual adjustments.

Thanks to the flexibility of **core**suite **designer**, it can be built into business processes and extended very easily. Solutions, which needed an additional AddOn are ommited, because they can be described with **core**suite **designer**.

Overview of the functions.

• Marketing documents configuring and printing sales and purchase forms, such as offers, delivery notes, bills, etc.

• Reports, lists, cross charts, including multicharts, masterdetails/subreports, combined with all other objects, e.g., charts in spreadsheets.

• Diagrams/charts for single or combined with reports.

• Interactive forms meaning user input in print preview, with drill-down functions (e.g. opening the client's order directly from the report).

• Tags incl. barcodes and graphics for all major barcode formats (also 2-D QRCode). Measures are freely definable as well. Compatible with well-known printer labels like Zebra.

• Create letters without text edition with the **core**suite **editor**. It is retrievable in each SAP® text field and can be used to make small changes to texts.

Advantages.

With the **core**suite **designer** you can find solutions for printing and reporting problems of your business. The designer simplifies the handling of marketing documents, charts, diagrams, reports etc., which leads to time saving and more efficient working process.
