

iMatrix

Inventory Tracking Solution

SAP® Certified
SAP Business One Integration

Product Variants for SAP Business One

Rapid changes in market demand, new opportunities due to worldwide marketing, global sourcing of materials, and new manufacturing technology, means many companies need to change their *Inventory Management* approach and change the process for Inventory Control.

In today's competitive marketing approach customers want choices. No matter what you sell - *apparel, jewellery, hardware, sporting goods* - the complexity of managing inventory with a variety of features like color, size and style can overload standard order entry and inventory systems.

In the environment of increasing customer experience and increasing customer loyalty effective management and proper inventory tracking are two most powerful tools to beat the competition and capture the market.

iMatrix is a product variants management solution designed for companies that sell, manage or procure items that have similar attributes such as size, color or style. A matrix item structure is identified by a parent item and categorized by child items having similar attributes. Order entry staff can easily filter items with similar attributes to bring into an order. With matrix order entry capability, you quickly fulfill orders for multi-attribute items. Once the order is entered, items are processed through the standard *SAP Business One* order processing cycle. You can also leverage standard order processing capabilities of SAP Business One such as special pricing, warehouse, availability check, etc.

Product Benefits

Reduce Order Entry Time

The iMatrix solution provides matrix order entry capability, enabling visibility of full product range so that you can quickly enter sales and purchase orders.

Speed up Item Master Management

The iMatrix solution provides a quick way to set up a product range for new multi-attribute items. Rather than creating each item one at a time as in traditional item master data management, you can set up a template of SKUs with product attributes and attribute values. Complete or partial range of SKUs can further be converted to matrix child items in a single go. This capability saves considerable time.

Improve Inventory Visibility

The iMatrix solution allows you to view inventory information for multi-attribute items in a single unified view.

Solution Integration

The iMatrix solution is integrated with the following CitiXsys products:

- iVend Retail
- Inventory Pro

Product Features

- Excel based tool to define upload template which validates items before upload and generates error messages by items
- Improve inventory visibility for multi-variant items
- Inform customers of availability for each product variant with one matrix order entry view
- Increase sales with the ability to sell with ease across the full product range.
- Two-Dimensional order entry capability
- View all product variants from one screen.
- Set up inventory faster for new multi-attribute items
- User definable codes and description for each SKU
- Setup inheritance for parent item properties to be drawn when creating child items.
- Create separate order lines for each product variant selected during sales entry.
- Works with standard SAP Business One marketing documents
- Matrix child items are included in MRP runs and Stock taking
